SWIMMING POOLS

Installing a pool conditioner on your pool system will save you significant amounts of time and money for the rest of your pools life!

- Spending too much on chemicals?
- Having trouble keeping your pool sparkling clean?
- Got problems with algae, stains or marks?
- Constantly replacing pumps and chlorinator parts?
- Getting issues with irritation in your eyes after swimming?

Anyone who owns a swimming pool or spa will tell you how difficult and expensive it is to keep everything 'just right'. Swimming pool maintenance can be time consuming and ongoing.

Many of the issues you experience with your pool are caused by the minerals and salts in the water.

BENEFITS OF INSTALLING A POOL CONDITIONER

- Swim in less chemicals and softer water
- The pipes, pumps, heating elements, filter and salt water chlorinator of your pool system will run more efficiently and also have an extended life
- No more unsightly spots of algae or scale marks at the waterline
- Paintwork and tiles will need less cleaning and maintenance
- Installed in the recirculating loop means every time the water is recirculated through the pump it gets treated. The more the water is recirculated through the system the better the result
- There are no moving parts to be replaced and installation is simple

If you would prefer to enjoy your pool rather than constantly testing and cleaning – this is the perfect pool maintenance solution for you.
